Ahmed Khalil

Software Engineer

Maadi, Cairo, Egypt | +20 102 127 2214 | ahmed.khalil.developer@gmail.com | GitHub | LinkedIn

SUMMARY

Software Engineer with hands-on experience building web applications, dashboards, and internal business tools, from the database to deployment. Works across the full stack with Laravel, Django, and Node.js on the backend and React, JavaScript, and Blade on the frontend. Focused on clean, readable code and well-structured systems that are easy to maintain and grow. Deploys applications with Docker, Dokploy, and CI/CD, and automates repetitive business tasks with n8n and Python. Uses AI tools such as Claude Code every day to work faster without lowering quality.

SKILLS

Languages	PHP, JavaScript, TypeScript, Java, C#, Python, SQL
Backend	Laravel, Django REST Framework, Node.js / Express, REST APIs, authentication and authorization (Sanctum, JWT, RBAC), queues, caching
Frontend	HTML, CSS, JavaScript, React, Inertia.js, Laravel Blade, Tailwind CSS, Bootstrap, responsive and right-to-left layouts
Software Design	Clean code, SOLID principles, design patterns, layered architecture (service and repository layers), system design
Databases	MySQL, MongoDB, SQLite, data modeling, indexing, query optimization
DevOps	Docker, Docker Compose, Dokploy, CI/CD, Linux VPS, Nginx, Redis, DNS, cPanel
Automation and AI	n8n workflows, AI-powered automations, Python scripting, Selenium, Claude Code
Testing and Tools	PHPUnit, Pest, Postman, Git, GitHub, WordPress
Currently Learning	System design, software architecture, AutoCAD automation with the .NET API (C#)

EXPERIENCE

Backend Developer | DotBytes — 2025 – Present

- Build backend features from business requirements, including REST APIs, authentication and permissions, order and invoice workflows, file uploads, notifications, and reports.
- Integrate third-party services and keep production code fast and maintainable with caching, queues, and clear service layers.
- Test features before release with Postman and PHPUnit, and work in a Git-based team workflow.

Software Developer | Soft Mission

- Built and maintained full-stack web features using Laravel, Blade, HTML, CSS, and JavaScript.

Backend Development and Software Testing Intern

- Built REST APIs and database models, tested features, and wrote clear, reproducible bug reports.

PROJECTS

Fieramico – Exhibition stand company website and CMS — Live | GitHub

- Built a lead-generation website for a company that designs and builds exhibition stands across Europe, with a portfolio, gallery, trade-fair and venue guides, two quote wizards, and a full admin dashboard.
- Delivered the site in English, Italian, and Arabic (full right-to-left support), with server-side rendering for SEO and a theme system with light and dark modes.
- Deployed with Docker and Dokploy on a VPS, with auto-deploys from GitHub, HTTPS, Redis, and a media worker.

Tech: Laravel 12, Inertia.js, React, TypeScript, Tailwind CSS, MySQL, Redis, Docker, Dokploy

PMS – Engineering project management platform

API Docs | GitHub

- Built a platform for engineering firms to manage projects, tasks, departments, budgets, invoices, documents, and employee leave, with separate Admin, Manager, and Employee access.
- Protected financial data with database transactions and race-safe invoice numbering, and added private file storage, notifications, CSV reports, and automated backups.
- Added dashboard analytics, global search, a deadlines calendar, and a Flutter mobile app on the same API, covered by 480 automated tests.

Tech: Laravel 13, React 19, Bootstrap 5, MySQL, Sanctum, Flutter

AttendAI CenterOS – Face-recognition attendance system

GitHub

- Built an offline-first attendance system for tutoring centers: a desktop app recognizes students by face, and an Arabic web dashboard manages groups, sessions, and reports, with face data kept on the local machine.

Tech: Python, InsightFace, ONNX Runtime, PySide6, Django

AutoCAD Drawing Data Extractor – C# plugin for AutoCAD

- Built a C# class library (DLL) with the AutoCAD .NET API that adds a custom command to AutoCAD.
- The command reads every shape in the drawing with its properties and exports them to JSON, ready to send to a backend API.

Tech: C#, .NET, AutoCAD .NET API, JSON

Invoice SaaS Platform – Multi-company invoicing

Live | GitHub

- Built a multi-company invoicing product with subscriptions, payments, roles, VAT, and PDF/Excel exports.

Tech: Laravel, MySQL, Redis, Docker

Find-Me – Graduation project

GitHub

- Built an AI app that matches photos to help identify missing people, tuned to reduce false matches.

Tech: Python, OpenCV, NumPy, Pandas, scikit-learn, Django, React

Fiera Exhibitions – Exhibition platform and lead management

Live | GitHub

- Built a lead-management platform with a multi-step inquiry form, lead scoring, and secure CAD file uploads.

Tech: Laravel, Inertia.js, React, TypeScript, Tailwind CSS, MySQL

Multi-Vendor E-Commerce Store

GitHub

- Built a multi-store marketplace with one checkout, transactional orders, stock handling, and 2FA.

Tech: Laravel, Fortify, Sanctum, Blade, MySQL

Crow Store – Online shop

Live

- Built and deployed an online store with product management, a shopping cart, and a complete order flow.

Tech: Laravel, Blade, JavaScript, MySQL

Product Management Dashboard and API

GitHub

- Built a product and category API with roles, translations, filtering, and media uploads, using a service layer.

Tech: Laravel, Sanctum, MySQL

E-Commerce and Storefront APIs

GitHub (Node.js) | GitHub (Django)

- Built two store APIs (products, carts, orders, reviews) with token auth, roles, search, and pagination.

Tech: Node.js, Express, MongoDB, Django REST Framework, JWT

EDUCATION

Bachelor of Computer Science
Menofia University, Egypt | 2020 – 2024

LANGUAGES

Arabic – Native
English – Intermediate
German – Beginner
